

Hello Friend,

We here at [www.HomeWaterSafety.com](http://www.HomeWaterSafety.com) want you to have . . .

**... Information you need to know that can save your loved ones great pain and suffering.**

We try our best to protect our loved ones (especially our children) from the dangers of the real world. We use safety belts and car seats while commuting, sunscreen at the beach, and look both ways before crossing the street but the most dangerous place by far is actually in our own homes.

Of the hundreds of thousands of injuries which occur in the home, burns as a result of scalding are one of the leading culprits and may have some of the most long-lasting effects including physical and emotional scarring that may last a lifetime!

Unfortunately, those who are least equipped to handle these injuries, children and the elderly, are more apt to suffer from them.

#### **Scalding Statistics:**

- Every year ERs across the country see **3,800 serious, life threatening scald injuries that occurred within the home.**
- **Of those, nearly 9% result in death!**
- **35,000 children each year are seen in the ERs across the country because of burn injuries as a result of scalding (that's 69% of all children's ER visits!)**
- **Of those cases, 42% involve injuries covering 10% or more of a child's body and 45% require extensive surgeries to heal, including multiple skin grafts.**
- **Elderly individuals burn more easily due to the natural thinning of their skin.**
- **The elderly are 50% more likely to die from scald injuries.**

**hot stop** products are low-cost, effective, and will protect your loved ones!

These simple devices prevent life threatening and disfiguring injuries in your home. They contain revolutionary technology unlike any other device on the market that instantly reduces the flow of water to a trickle when a temperature spike or increase is detected. These temperature increases can result from having your heater adjusted too high or simply from flushing a toilet! These devices only allow the flow of water to return to normal *after* the temperature has returned to safe levels and can easily prevent thousands of scalding incidents and thousands of injuries within your home.

You can choose from tub spouts, shower heads, handheld shower units, and combinations of them all to fit your individual needs.

Unlike expensive units that have to be integrated into your water heating system,

### **hot stop** Products:

- Are easily installed in your tub or shower and don't require a plumber. (This makes them excellent for do-it-yourselfers or those living in apartments, dorms, and rental properties where access to the heating system is not available or allowed.)
- Are a great value (ranging from \$45 to \$90 depending on the products you choose.)
- Are made out of high-quality materials and to demanding specifications (American Society of Safety Engineers specification 1062.)
- Come with a no-questions-asked 10 year warranty!

### **Don't Hesitate—Act Now Before It's Too Late!**

Please visit my website at [www.HomeWaterSafety.com](http://www.HomeWaterSafety.com) to learn more about the very real dangers of scalding and how these one-of-a-kind, inexpensive devices can protect you and your family from a needless tragedy today. For your convenience, I've also attached a fax/mail order form.

Thank you for your time,
